This is the total tons of combined straw by county (Sorghum, Wheat, Oats, Barley). It is based on the NASS data and calculated using a ten year average from 1999-2008. In order to be included in the ten year average there had to be a reported yield in at least nine of the ten years. Additionally a harvest index of .4 was used for all included crops.
The cross hatch indicates counties that had a straw yield in excess of 6000 lbs/acre.
Total Tons of Straw by County
10-year average (thousands)

Total tons in the counties that had greater than 6000 lbs/acre straw
This represents the total tons “available” in excess of 6000 lbs/acre.
